

# Asia-Oceania GEOSS Task 10/11 — Update on data sharing and data cubes

Presented by Qinhua Liu (RADI)

**24<sup>th</sup> October 2018**  
**Kyoto, Japan**

## Our challenge for AOGEOSS data sharing

country rank with its in-orbit civil EO satellites

**how much data they can feed self?**

country rank with the internet connection speed

**how much data they can move back?**

Big difference on the capacity of earth observation data for regional countries:

- Data-rich country
- Data-poor country

## Vision of AOGEOSS data sharing

- To bridge the EO **gap** between data-rich and data-hungry countries in AO region
- To promote geospatial data service **cooperation** around regional countries and programmes
- To support the **projects** AOGEOSS identified

# Developing Approaches and Datasets

Utilize infrastructure, resources and capacity to **develop integrated and sustained observations products**; Provide a platform for regional countries to **advance data sharing and information services**;

- Member countries of AOGEOSS are highly engaged and committed to providing a long term operational infrastructure, products, services, support and capacity building, **Datasets and platforms are encouraged to be developed regarding users' needs** .
- The Open Data Cube (ODC), Japan's Data Integration and Analysis System (DIAS) and China's SpectrumEarth (SE) system were all recognised as **mature systems addressing different needs** within AO community.

# AOGEOSS Data Response for Emergency Management

	New Zealand 2016	Mexico 2017	Iran-Iraq 2017	Gita Typhoon 2018
Satellites	7	10	10	4
Images	219	293	570	294

**AOGEOSS Disaster task, focused on recovery, to be finalized by the Coordination Board this week and endorsed by AO Caucus next week.**

# ARD framework

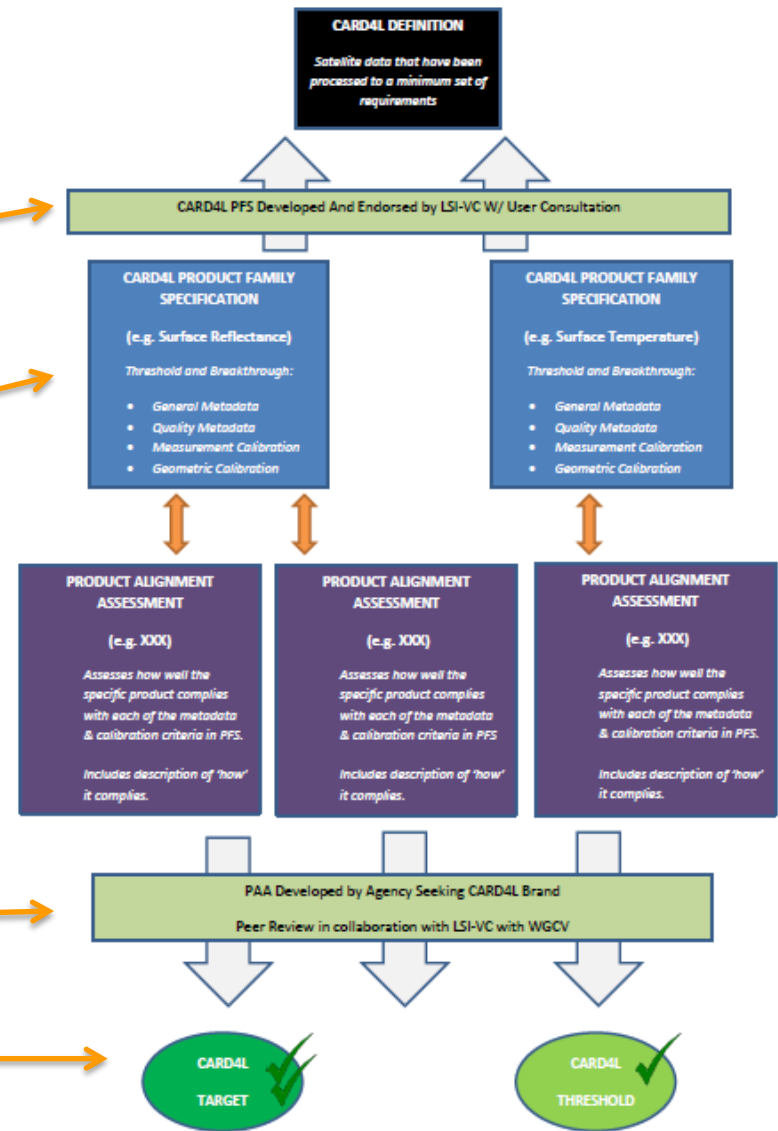

Definition of CARD4L

Product families with specifications

Providers self-assess how well their products meet the specifications

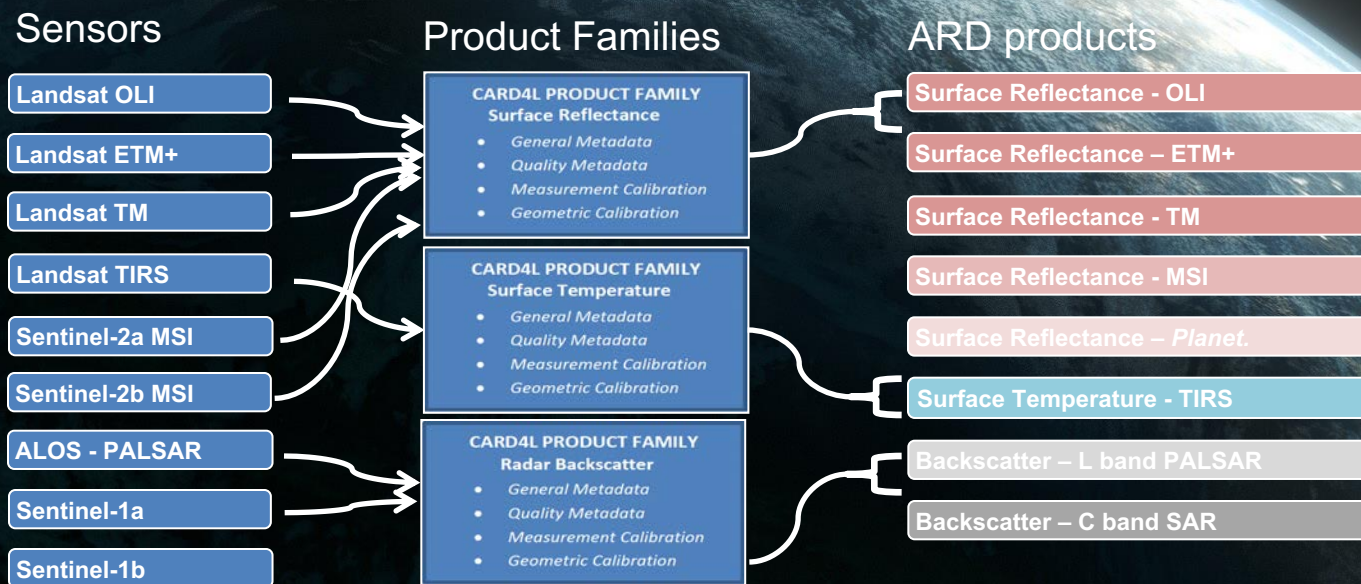

Peer review

CARD4L stamp !

2018 ARD Standards: <http://ceos.org/ard/>

# ARD needs a home: Asia Oceania Data Hub

**Rolling out in 2019**

- **Landsat, Sentinel , CBERS/GF, ZY-3, GCOM-C, Himawari-8, ALOS and more**
- **CEOS CARD4L compliant**
- **Based in a commercial cloud(s)**
  - **Platform for regional cooperation**
  - **Cheaper/easier/more reliable access to download and analyse in-situ data**
  - **Increasing interest in studying the region not just single country**
  - **Platform for aid-related projects in the region**
  - **Platform for export of commercial products**
  - **Data is ready to ingestion into any platform**
  - **Hub funds storage and users pay for their own compute**

## Open Data Cube: An international movement

## Basic set up of Cambodia Cube

Landsat 5, 7, 8,  
Sentinel 2a/2b, ALOS

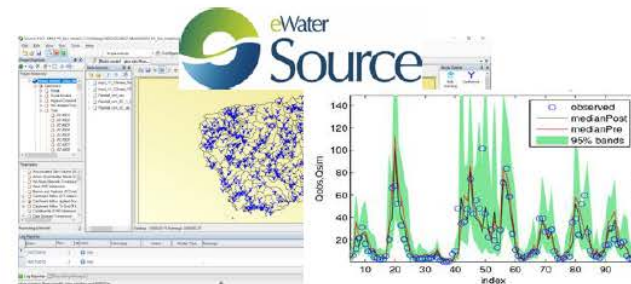

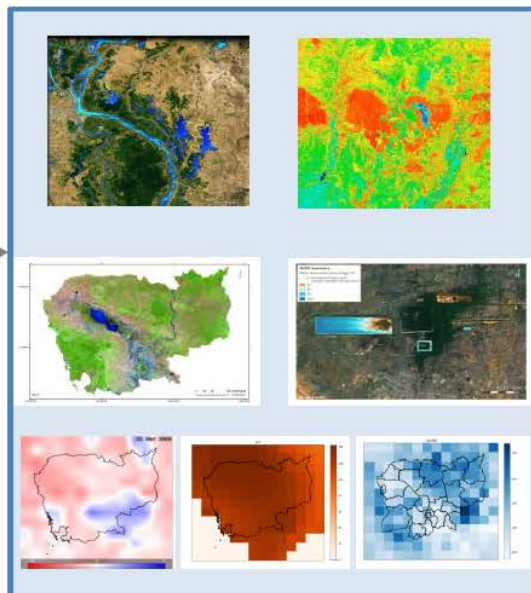

Environmental Data  
Temperature  
Digital Elevation Model

Gridded rainfall  
Bias corrected data  
Forecasted data

### Open Data Cube: Cambodia Cube

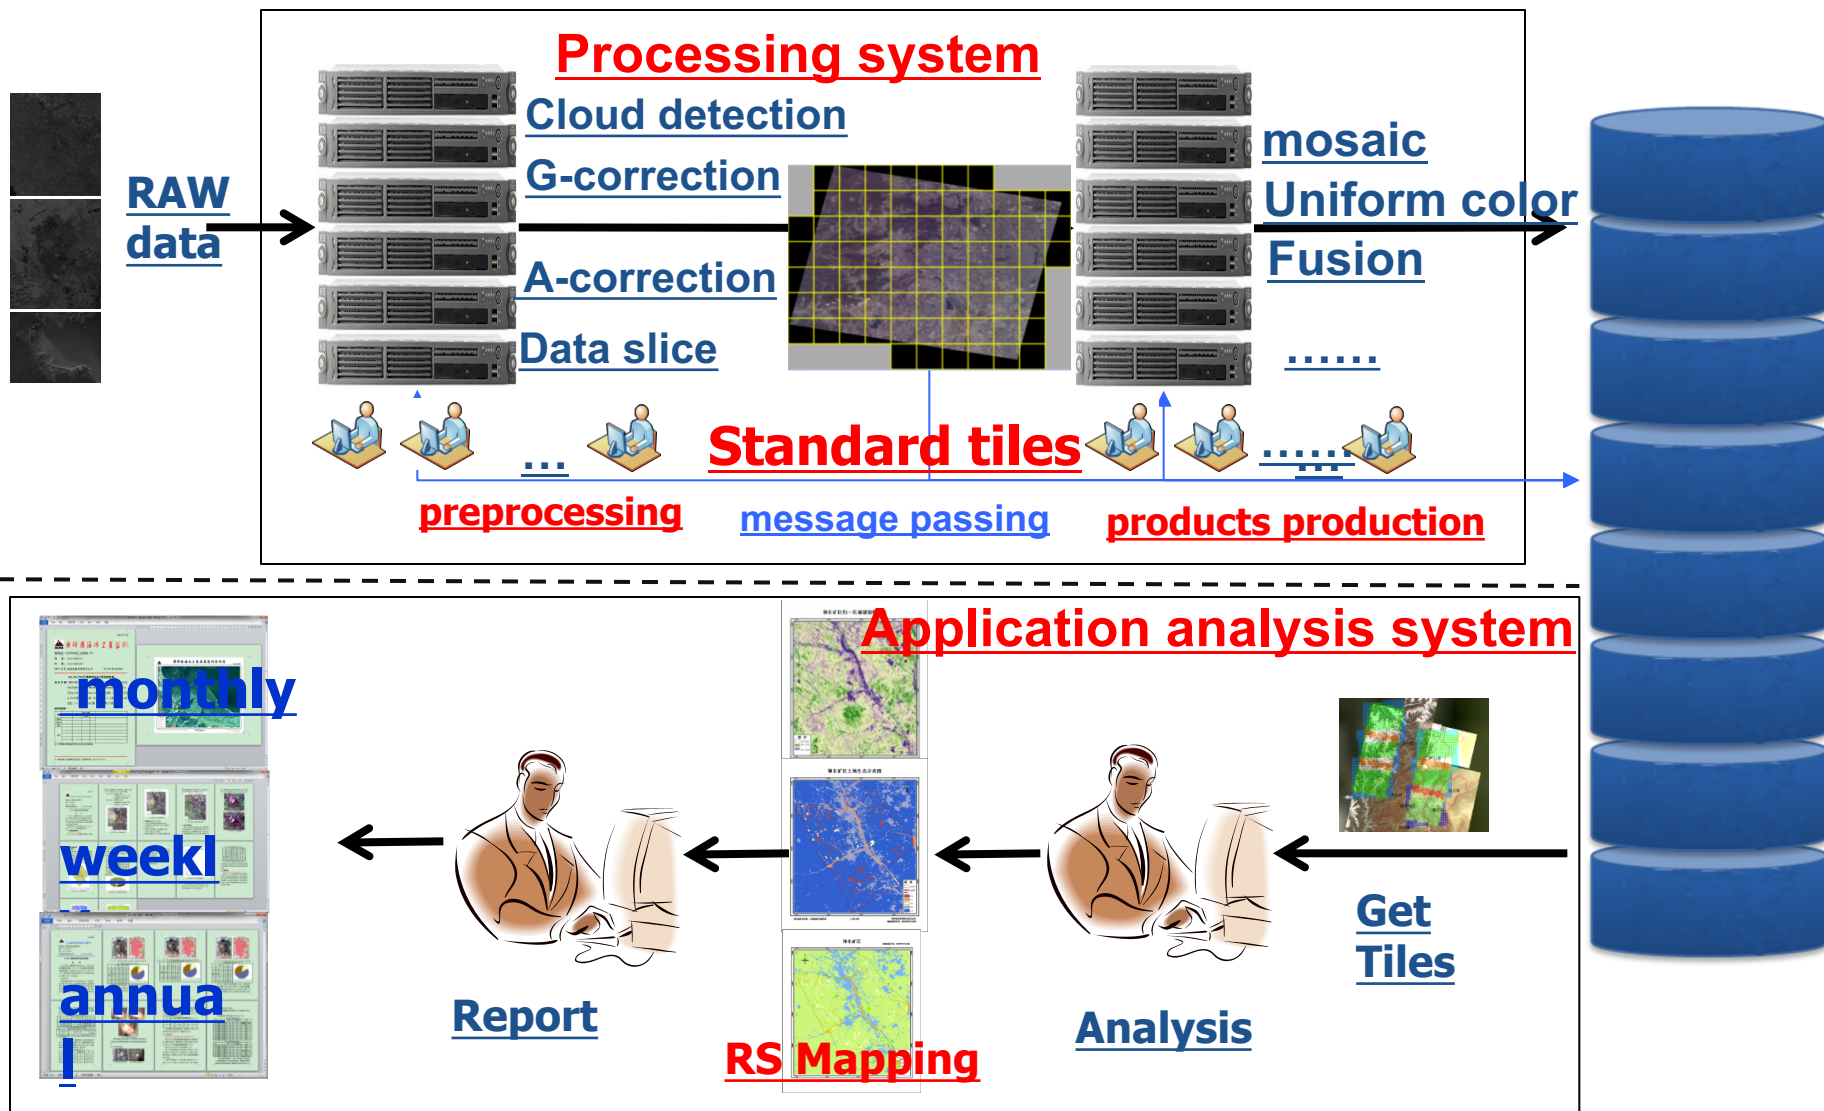

eWater Source Ensembles of  
Hydrological Response

eWater Dashboard

# SpectrumEarth

# System performance

## Data Service

More than 3 million scenes, near  
3PB satellite remote sensing data

## Information extraction

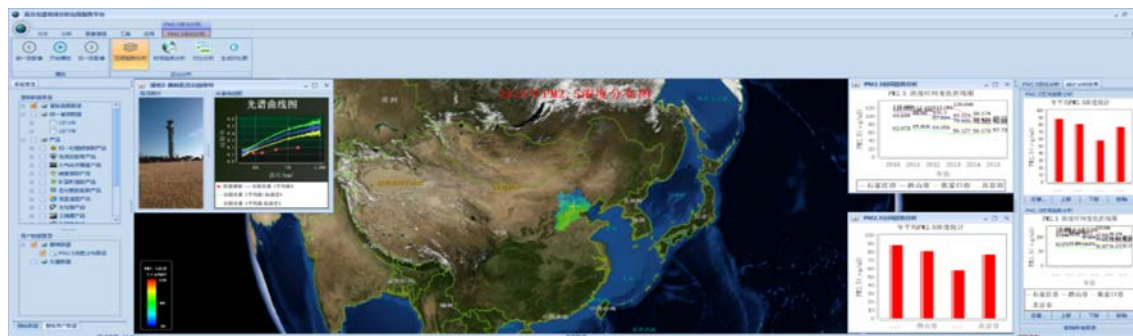

More than 300 information  
product extraction algorithms.

## Computing capability

100 trillion times per second  
platform processing capability.

## Group

Nearly 200 remote sensing  
information R & D and  
production teams .

1° population density

1°NPP

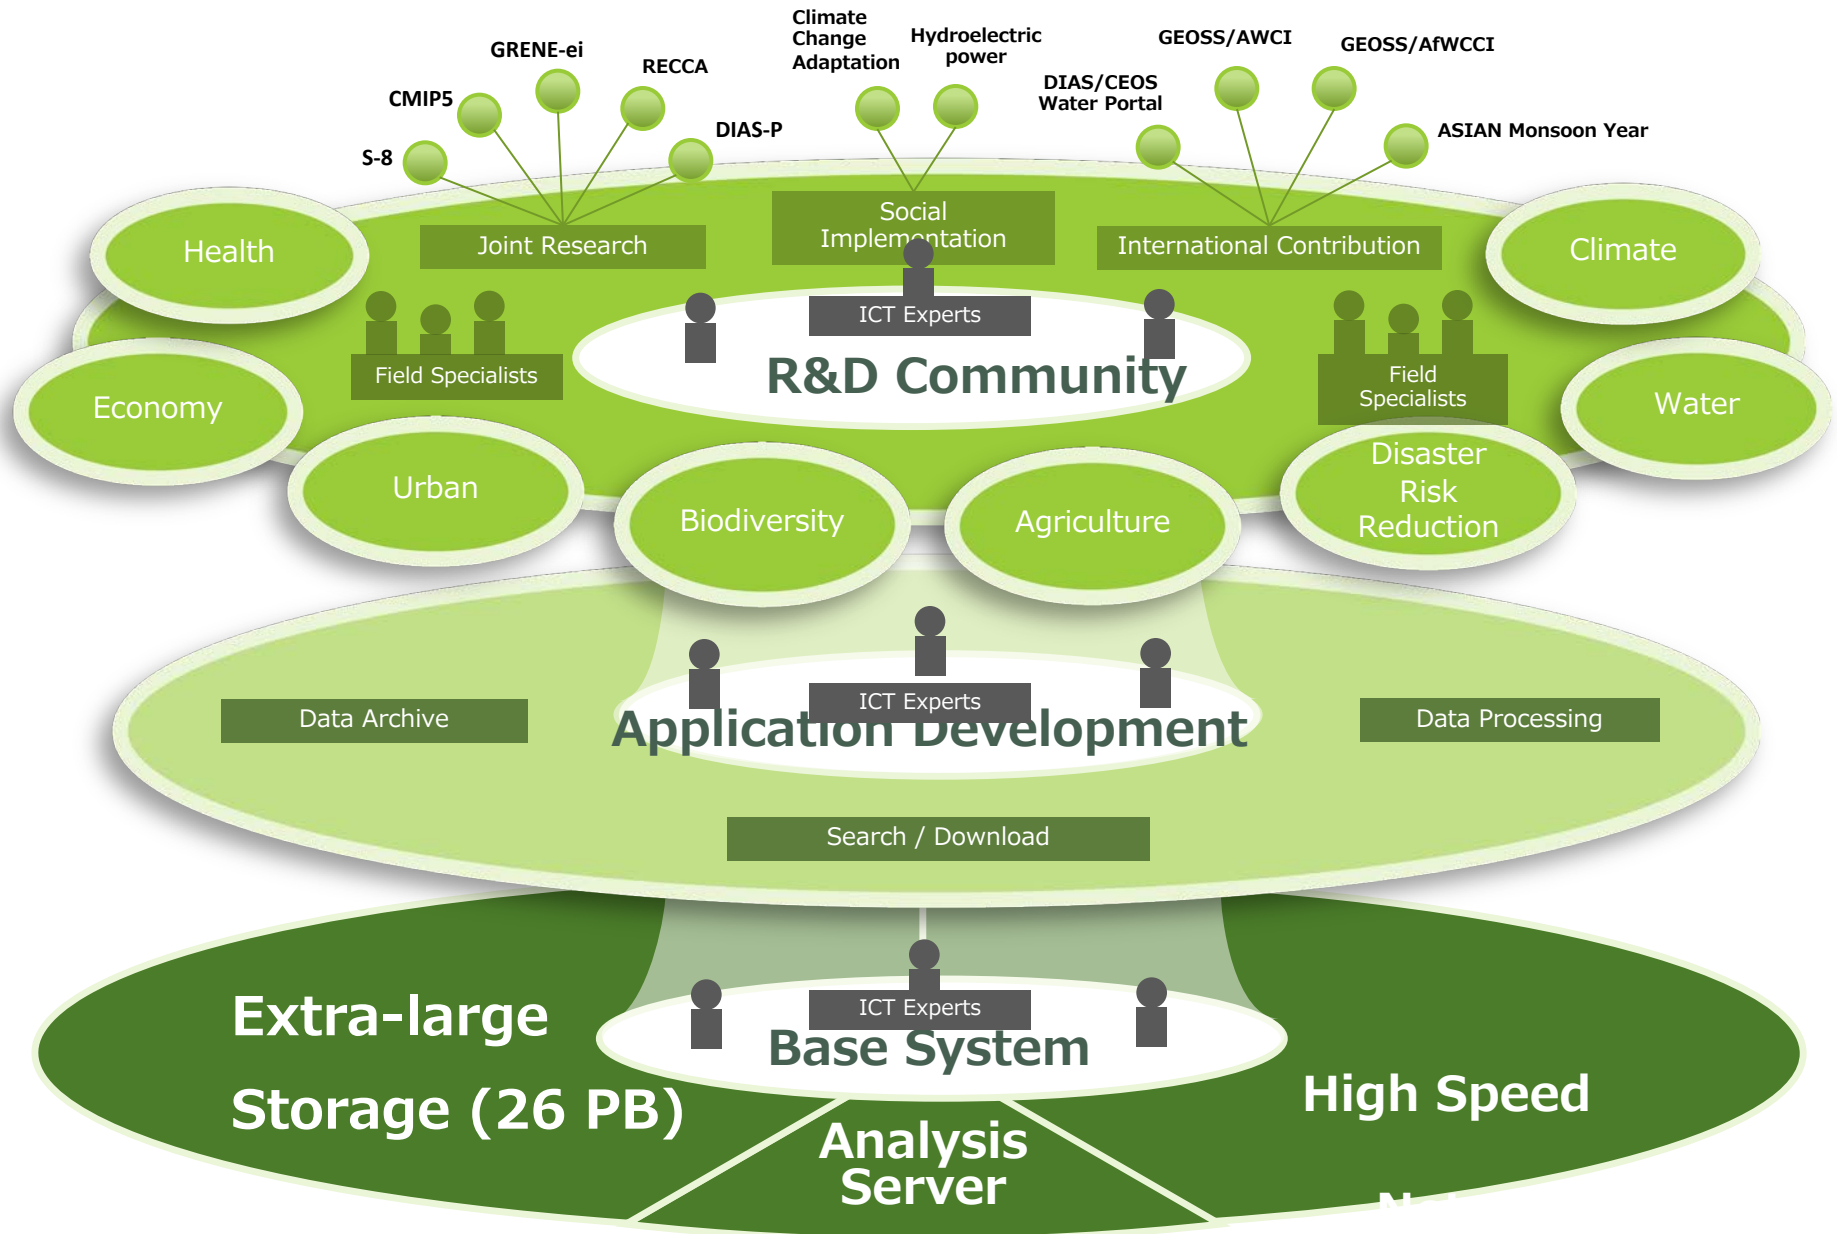

1°mean monthly temperature

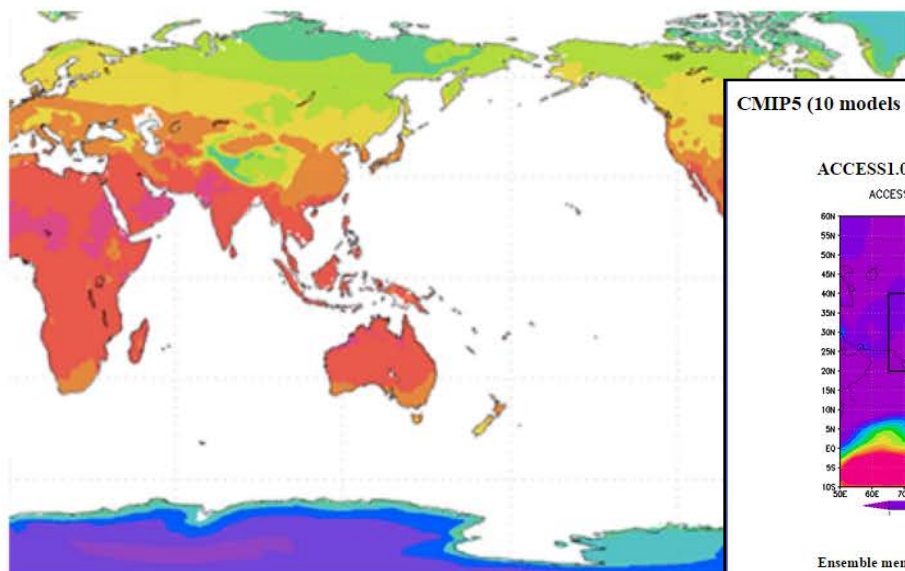

1° evapotranspiration

# DIAS: Structure

# CMIP5 Data Analysis System

This system is comprised of a set of tools that provide the Intercomparison Project Phase 5 (CMIP5), which has wide-reanalysis data as reference data for comparison with CMIP5 reproducibility of climate models.

## HOW TO USE

A common web application account is necessary.

Please contact the DIAS Office for details:

CMIP5 (10 models / 66 ensemble members): [Open in New Tab](#)

### ACCESS1.0

ACCESS1.0 (ens\_mean) : Scorr=0.807681, RMSE=0.482758  
PR [mm/day] surface Jan (1979-2005)

### Ensemble member (3)

ACCESS1.0 (r1i1p1) : Scorr=0.813673, RMSE=0.508184  
PR [mm/day] surface Jan (1979-2005)

### Past: Extreme rainfall

### Future: Extreme rainfall

ACCESS1.0 (r2i1p1) : Scorr=0.788675, RMSE=0.460589  
PR [mm/day] surface Jan (1979-2005)

ACCESS1.0 (r3i1p1)  
PR [mm/day] surface Jan (1979-2005)

# AO GEOSS Capacity Building

## ARD Development

- Increased uptake of CARD4L from data providers in Asia Oceania
- Development of new ARD standards for SAR, Oceans and coasts

## Asia-Oceania Data Hub

- Roll out of ARD for Landsat and Sentinel for all of SE Asia and Oceania
- Establishment of regional governance and membership model
- Inclusion of ARD data from AO data providers

## Capacity building

- Run greater than three training course within the year
- Development of greater self service materials (Webinars, wikis, forums etc)

## Information Services & Pilot Researches

- Development of products to aid reporting of GEO's three priority engagements
- Further cooperation and intergration between ODC, Spectrum Earth and DIAS
- Explore operational deployments of ODC for AO GEO's priority regions (Mekong, Himalayas and Pacific

Open Data Cube: Harnessing the Power  
of Satellite Data ONE PIXEL AT A TIME

**THANKS!**

**AOGEOSS**
