

WG4; Ocean Observation and Society

**Co-Chairs;
Masao Fukasawa*, Satheesh C. Shenoi**,
Keisuke Mizuno***

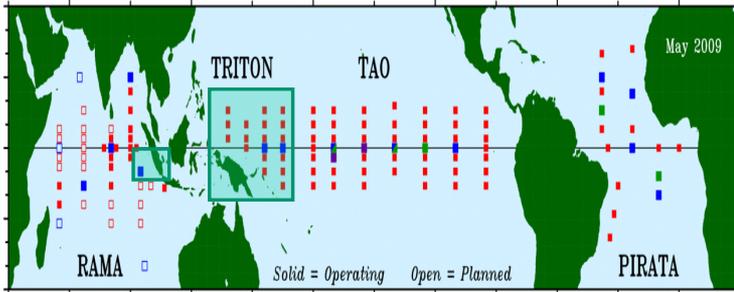

*** Japan Agency for Marine-Earth Science and Technology
(JAMSTEC)**

**** Indian National Centre for Ocean Information Services
• (INCOIS)**

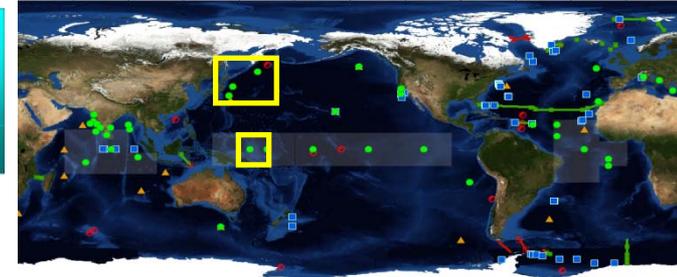

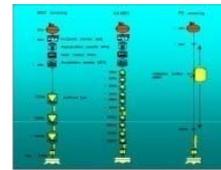

Background (1)

Global Ocean Observation (– Blue water –)

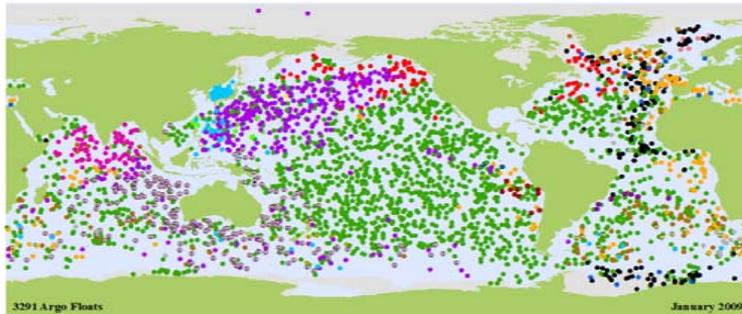

GCOS/GOOS Observing System

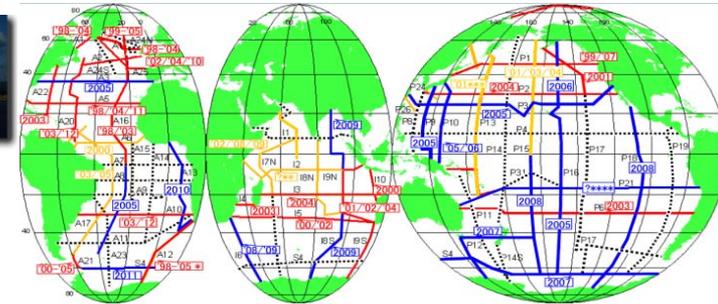

Equatorial buoy array

Ocean SITE (BGC ,CO₂ flux time series)

Argo

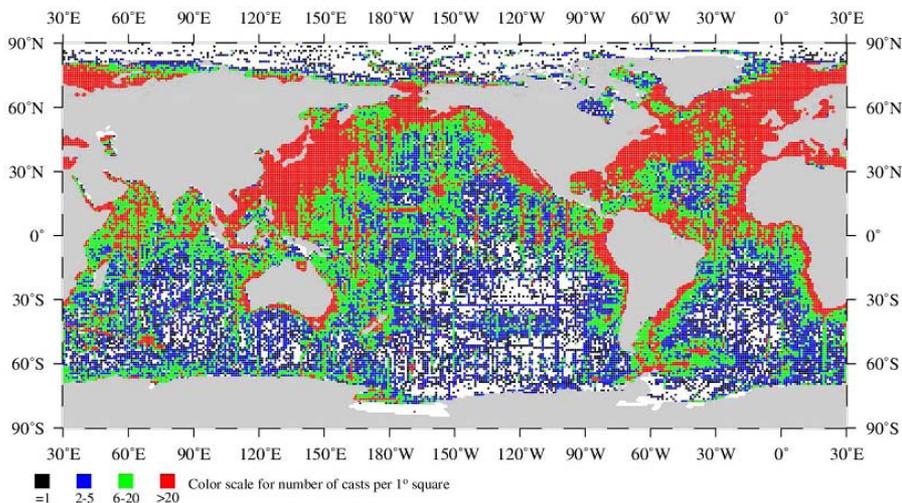

Repeat Hydrography

Coastal Observation (– Green water –)

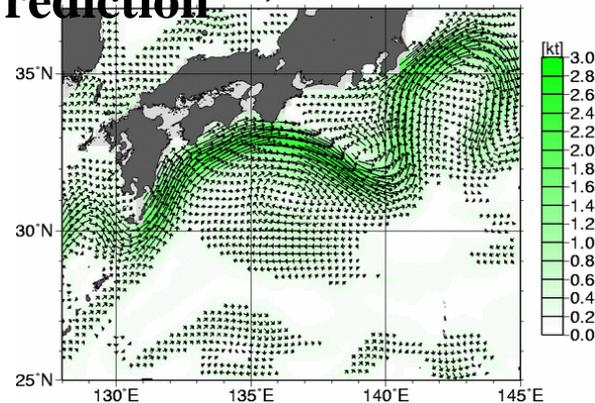

Historical Ocean data distribution

Ocean Standard Depth casts (WOD09)

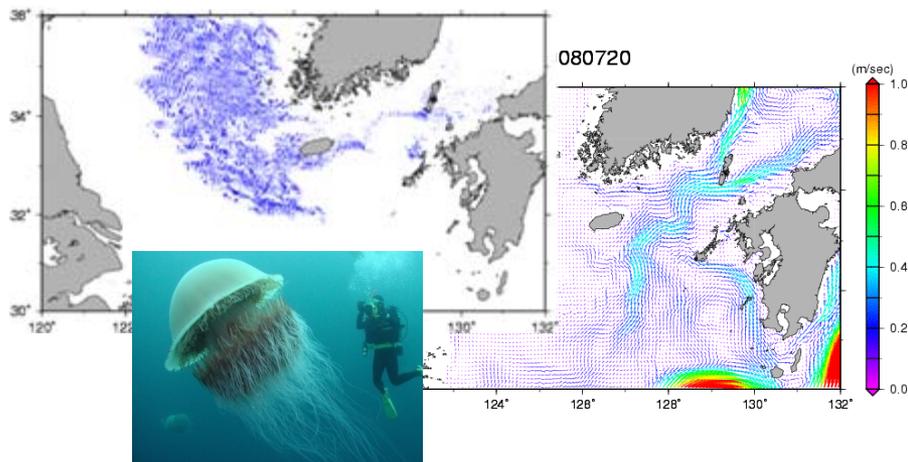

Sea Surface Current Prediction

Predicted Sea Surface Current 2007/05/10

Forecast of the Giant Jelly Fish

Ocean observation in Green water

- Enormous effort for coastal ocean obs.
- Various kinds of societal requirement for coastal monitoring & prediction
- Linkage to Global data is essential
- Regional Alliance for data sharing is essential to meet many needs

Aims of this session Observation

- **To share possible contributions of data integration to social benefits**
- **To learn status of data collection and dissemination in each international program and country**
- **To start the discussion on and to share the ideas on how to disseminate and integrate the coastal ocean observation data with the blue water data**

Outline of the session

Session 1: Present status of Ocean observation
(GCOS oriented projects in blue water)

**Argo/Repeat Hydrography/Buoy array and their
Data System**

Session 2: Present status of Ocean observation
(Regional/domestic projects in green water)

Regional Observing/Data System

Session 3: Toward Social benefits
(Linkages b/w Observation/Societal Benefit)

**Lesson from actual cases of ocean services for
the society**

Points for Discussion

- **What observation & data system are required for the society?**
- **Way to disseminate and integrate ocean observation data in green water with blue water data**
- **Necessary actions**
