

ESCAP Regional Drought Mechanism

Space Applications Section ICT and Disaster Risk Reduction Division United Nations ESCAP

9th GEOSS Asia-Pacific Symposium 11-13 January 2017 Tokyo, Japan

ESCAP and RESAP

- United Nations Economic and Social Commission for Asia and the Pacific (ESCAP)
- 62 member and associate member States
- ESCAP's Regional Space Applications Programme for Sustainable Development (RESAP) has been operating for around 22 years
- Covers 25 member States

Guided by Resolution 68/5 Asia-Pacific Plan of Action for Space Applications and GIS for Sustainable Development (2012-2017), though focus is primarily on disasters

Regional Drought Mechanism

- Strengthen the capacity of drought-prone member to access and effectively utilize space applications and GIS for drought monitoring and early warning
- Build regional cooperation platforms for capacity building on drought management
- Complement drought monitoring capacity with seasonal forecasting for effective planning
- Build greater capacity of drought-prone member States to develop a longterm planning, climate adaptation and drought management approach through climate risk analysis
- Pilot countries: Mongolia, Sri Lanka, Cambodia, Myanmar, Kyrgyzstan, Bangladesh, Afghanistan, Nepal
- Regional Service Nodes: China, India, Thailand and potentially others providing other services RIMES (seasonal forecasts), Australia (water budgeting (TBC)), etc….

What the mechanism offers..

1. Access to satellite data, products and services

- **Data** from multiple earth observation satellites
- **Products** Agricultural drought indices
- Services Immediate: seasonal forecasts, *in-season* crop/vegetation monitoring and early warning; next step: crop forecasting, agricultural land use/land cover changes for sustainable agriculture and efficient water management
- **Customization** of services for different institutions
- 2. Building the Institutional Capacity
- Specialized capacity development
- Networking with Regional Service Providers in China and India, Thailand, as well as with RIMES

Long-term benefits

- Link in-season monitoring with forecasts:
- Monsoon Forum
 Drought Mechanism

- Additional data, information and tools
- Experts from various countries committed to support
- Customized products for the national circumstances
- Tailored capacity building to utilize space information and applications
- With greater awareness, opportunities exist for other applications – other Ministries, expanding beyond space applications, etc.....

Example of Mongolia and Sri Lanka

Agro-ecological zones identified

Drought mapping was made combined by 3 regions which has more than 50% correlation including forest, steppe, desert steppe. The correlations between RS index and Drought index calculated by meteorological parameter were different in various natural zones separately.

Natural regional made from mapping of land cover classification by MODIS data in 2010.

		Soil moisture 10cm	AI	SPI
		VS	VS	VS
		RS indices	RS indices	RS indices
ITED	Forest	r = >45 (NDDI, VHI, TCI)		
	Steppe	r = >45 (VSWI)	r = >49 (TCI)	r = >46 (TCI, VSWI)
	Desert Steppe	r = >45 (VHI)	r = >45 (TCI, VHI)	r= >46 (TCI)

Indices tested

Mapping 10 drought indices using data 14 years.

Choice the following drought indices.

- RS drought indices (NDDI, TCI, VCI, VHI, VSWI)
- Meteorological indices (SPI, AI)

Yearly combined drought map - 2014

Drought Products Validation

biomass, CO2 and environmental parameter in 2009, 2010, 2011 field study at the Tuv, Dundgovi, Khentii

VHI 2010 .Aug

2011.9.14

Баян-Өнжүүл сумын төвөөс өмнө зүг 60км.

Хадат Толгой

DroughtWatch for Mongolia

Data management

(in-situ, statistics, Geotiff etc.)

• Data preprocessing

(RS data processing, composition)

- Indices calculation
- Drought monitoring

(by single index and combination indices dashboard)

• Statistics and analysis

(over the spatial, over time interval)

- Batch for the whole procedure
- DroughtWatch3.1(English+Chinese)

----इसरो डान्च NTSC

Access to variety of EO data for Sri Lankan Drought

- Drought Assessment using Interactive tools and data download
- Exclusive access to Sri Lanka for online information
- Training & hand-holding for data processing and analysis

http://bhuvan.nrsc.gov.in.

Mobile Smartphone - Field Data Collection (FDC)

- Mobile smartphone technologies for field data collection, online data transmission and geo-visualisation on Bhuvan platform.
- This has two parts
 - o Device based solution for field data collection and upload to server
 - Server-end App to process data, validation and geo-visualization of archived data

ISRO support to Myanmar

Thank you
