WG3: Using GEOSS to Manage Ecosystem and Conserve Biodiversity

- How GEOSS can contribute to monitor the change and adaptation of ecosystem and/or biodiversity in the global warming process? Or, what kind of system should be established or enhanced to do this?
- 2) How we can connect the large scaled observations with on-site observations?

Using GEOSS to manage ecosystems 10:00-12:00

- EAP-ILTER : Regional Effort on Ecosystem Research and Management Under Climate Change (Dr Zhao Shidong, Chair, EAP ILTER, China)

THE COLLABORATIVE PARTNERSHIP ON FORESTS

An informal, voluntary arrangement for collaboration among 14 international organizations and secretariats

Works through Joint Initiatives and other collaborative activities

Aims at promoting the management, conservation and sustainable development of all types of forests

- Consist of limited number of scientists with recognized expertise
- Are established on temporary basis
- Operate on basis of Terms of Reference
- Prepare assessment reports

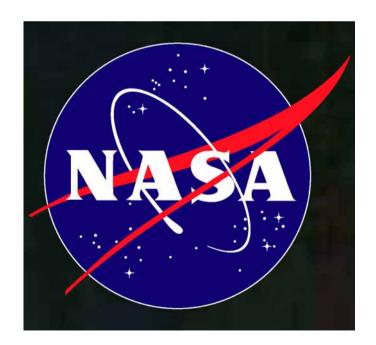

Using GEOSS to protect Biodiversity 13:00-15:00

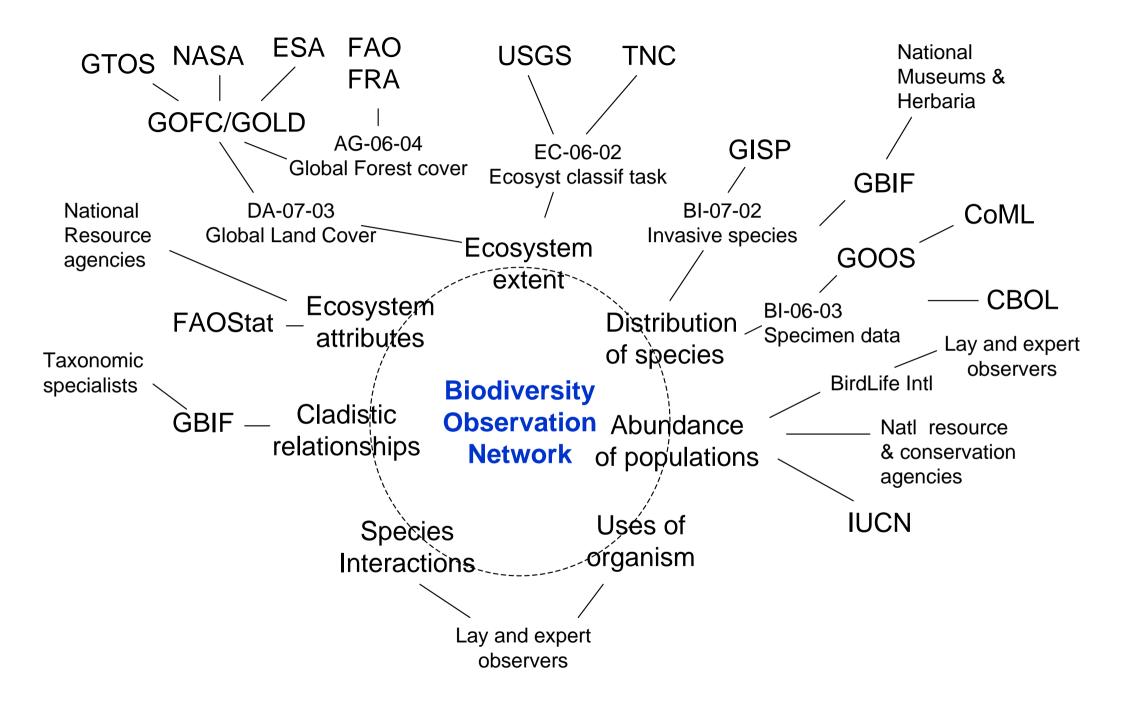

- Newest developments in the formation of the global Biodiversity Observation Network (GEO BON) (Bruno Walther, DIVERSITAS/NASA/GEO)
- NaGISA and DIWPA ---- as examples for strategic implimentation plan of global-scale and long-term biodiversity monitoring program (Dr Shirayama, Kyoto University)
- Monitoring Sites 1000, a nationwide project for monitoring ecosystems and biodiversity in Japan (Mr. Sakaguchi, Biodiversity Center of Japan, Ministry of Environment)
- **Biodiversity and Climate Change a role for GBIF** (Dr. Eamonn O Tuama, GBIF)
- Predicting potential habitats for plants under climate change and assessing vulnerability in Japan: especially referring to buna (Fagus crenata) forests (Tanaka, N., Matsui, T., Yagihashi, T., Taoda, H., FFPRI Japan)

The context of GEO BON

 DIVERSITAS and NASA have been appointed to lead task of developing a global Biodiversity Observation Network

Natural Geography In Shore Areas A Census of Marine Life Field Project

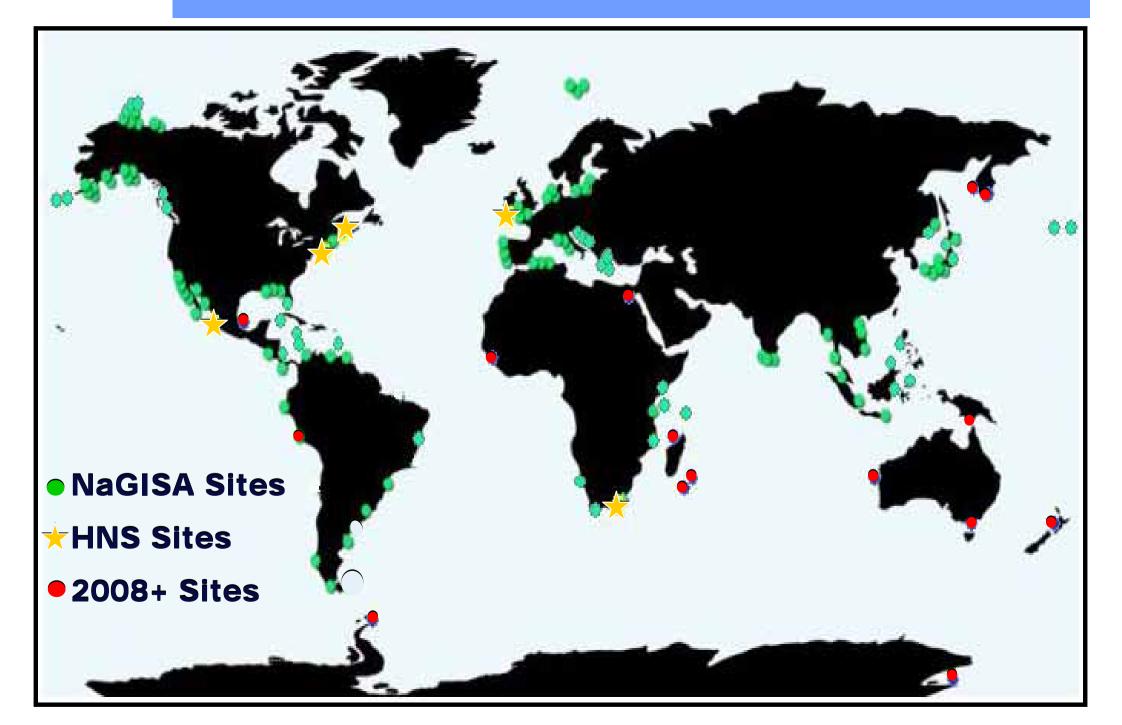

http://www.nagisa.coml.org/

Produced by Seto Marine Biological Laboratory, Field Science Education & Research Center, Kyoto University

Global Scope of Project 2

Challenge of JaLTER: Interdisciplinary cross-site study

-- Monitoring sites 1000 ---Ministry of Environment, Japan

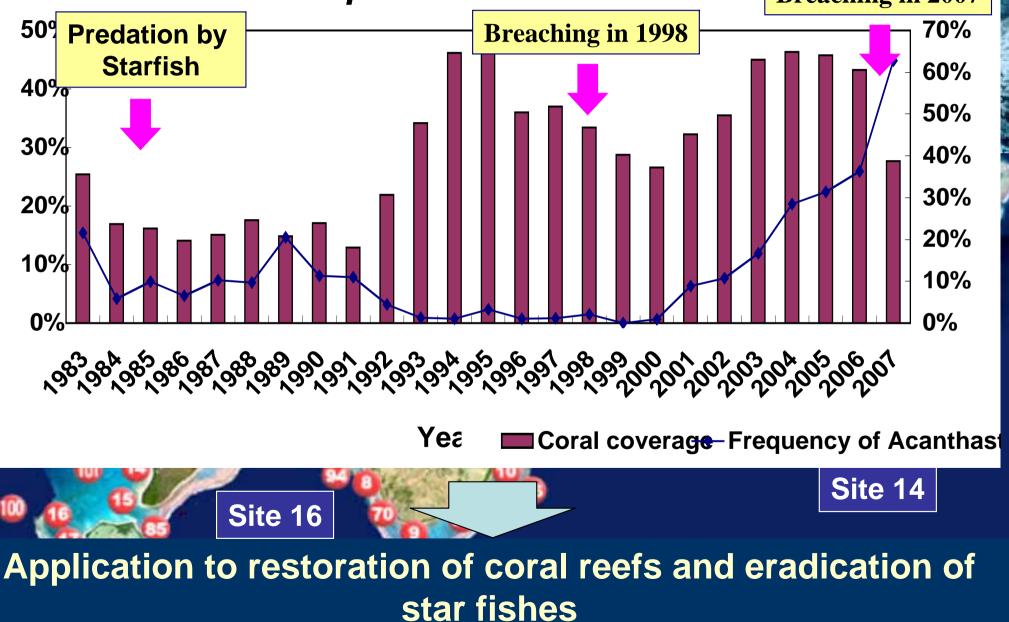

- ✓ Biodiversity & Ecosystem
- ✓Tree growth
- ✓Litter-fall
- ✓ Seed production
- ✓Forest-floor insects
- ✓Bird community

Forest and estuary sites are strongly over-lapped by JaLTER-site.

Mr. Sakamoto will explain details in the afternoon session.

Results of Coral Reef Monitoring in Sekisei-syouko

The change of coral coverage and frequency occurrent starfistance and frequency occurrent Breaching in 2007

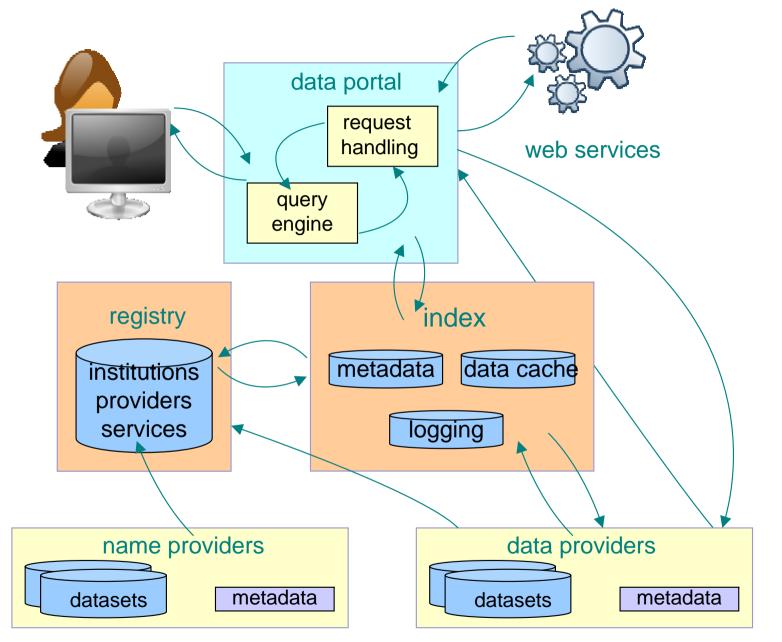

GBIF Mission

... to make the world's biodiversity data freely and universally available via the what is biodiversity?

GBIF follows the broadly outlined CBD recognition of levels of biological diversity:

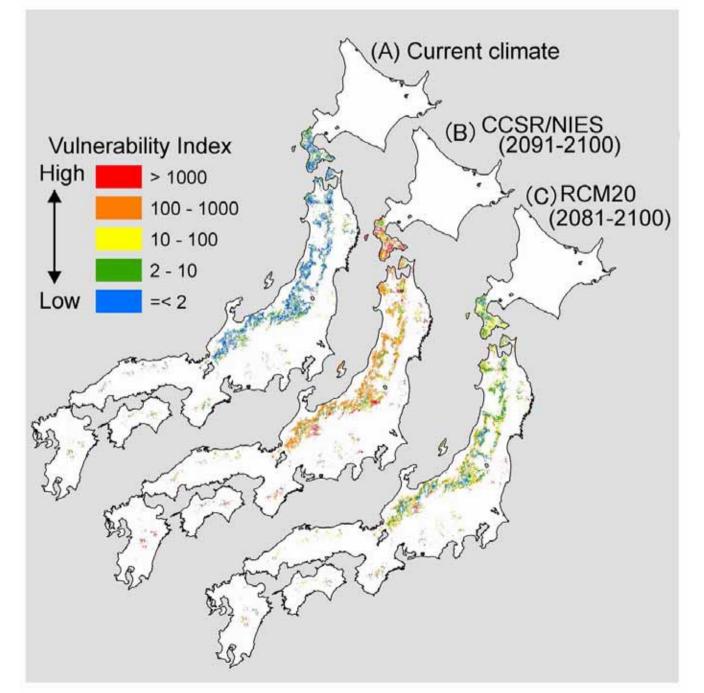

- Molecules / genes
 - Species
 - Ecosystems / ecology

Components of GBIF Architecture

Vulnerability Index for buna forests (VI) VI = 1 / Occurrence probability

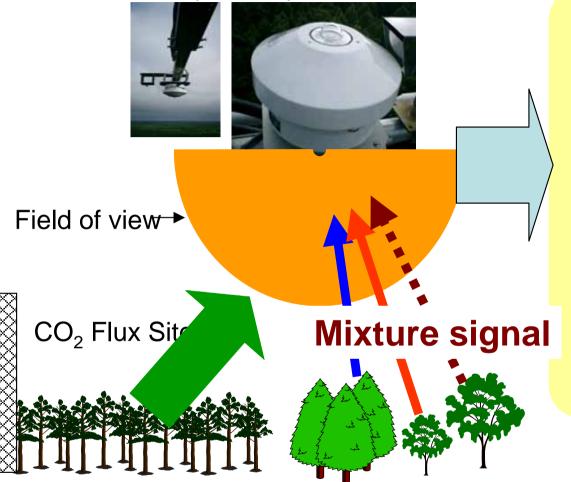

Linking remote sensing and on site observation 15:30-16:30

- A vegetation transition model at the topographical scale and its application to the Mongolian Forest-Steppe ecotone (R. Ishii, Frontier Research Center for Global Change)
- Introduction of Three-dimensional digital analysis of aerial photographs and Phenology monitoring camera system (Dr Oguma, NIES Japan)

General discussion and wrap up session summary 16:30-17:30

Development of Spectral Imager

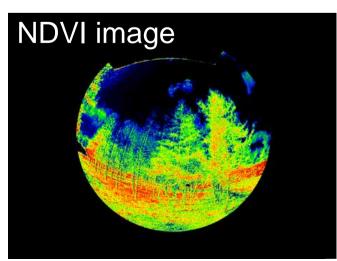

Hemispherical Spectro-radiometer

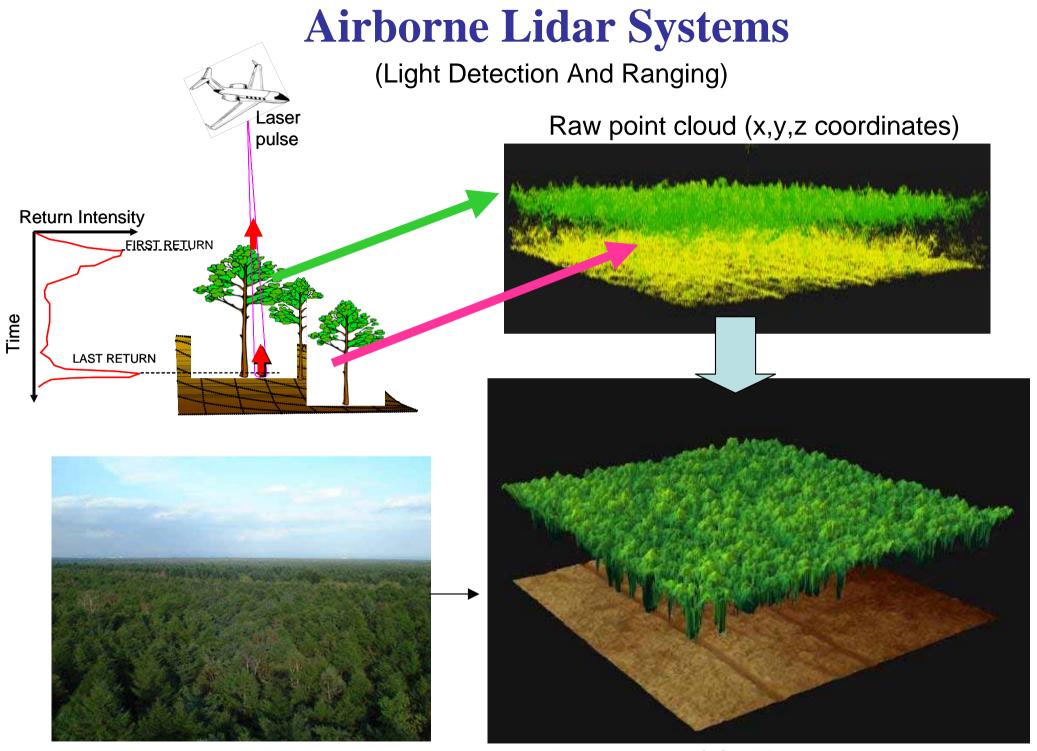

Natural forest

- All weather
- Low cost
- Easy operation
- Battery or Solar battery operation

Phenology Camera is required

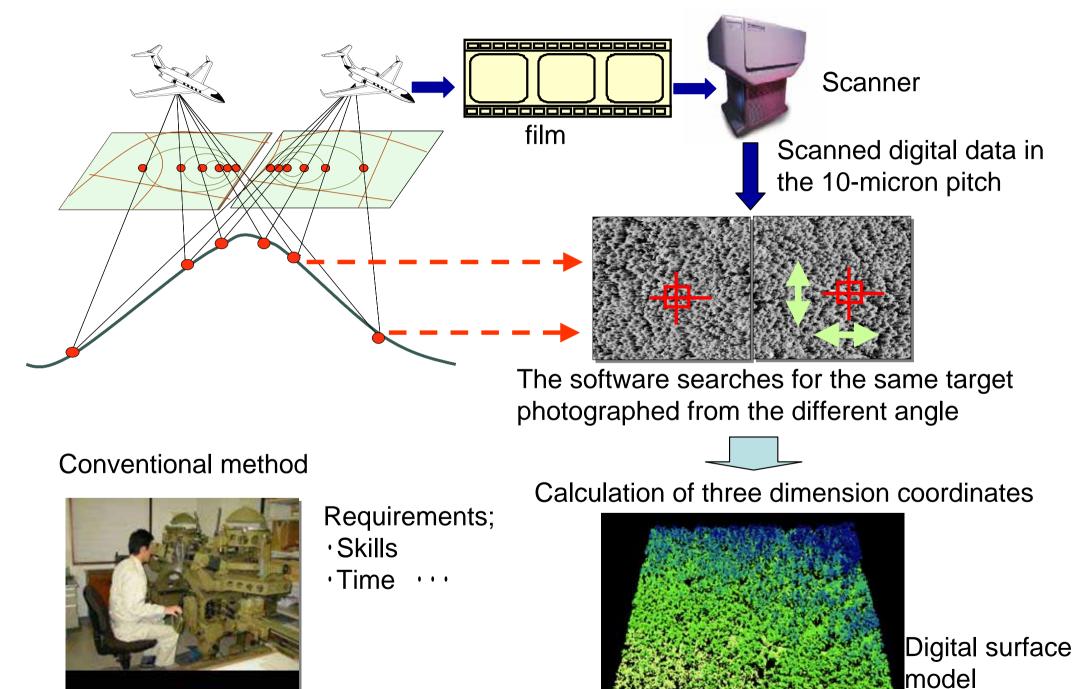

Larch tree

Tomakomai CO₂ Flux research site

Three-dimensional digital analysis of aerial photographs

Colored image by DCHM in 1946

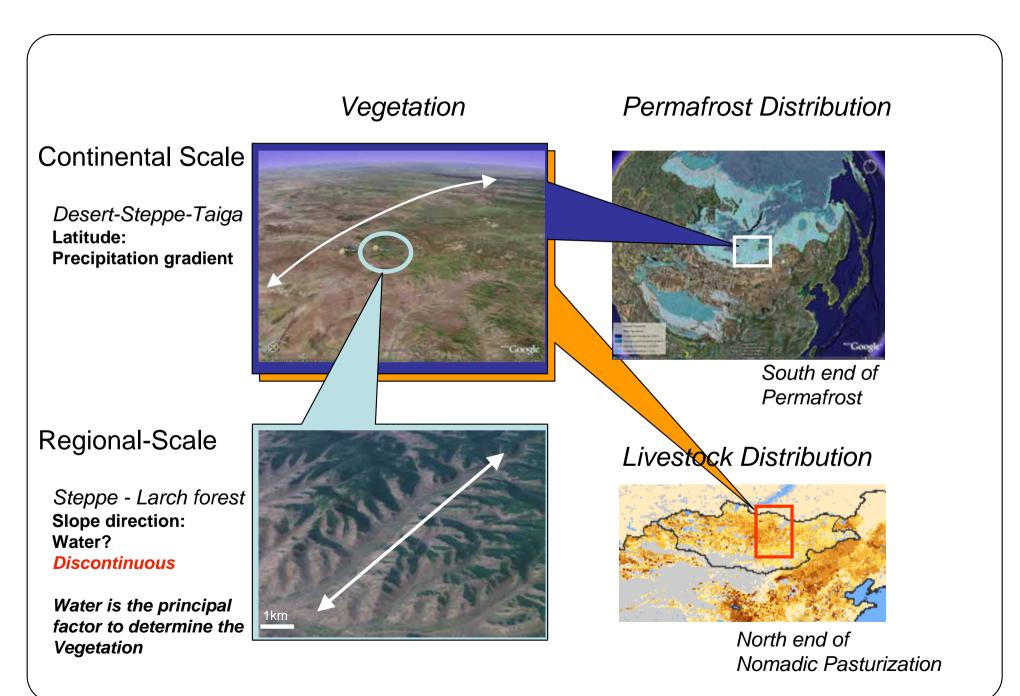

Colored image by DCHM in 2002

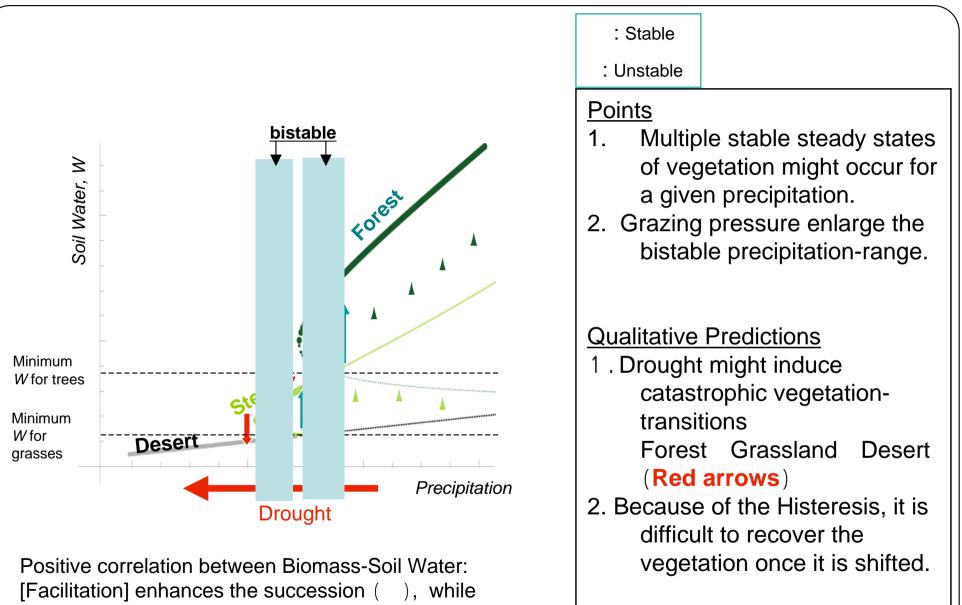

Target area & Sample site

Gachuurt (30km North-East of Ulaanbatar)

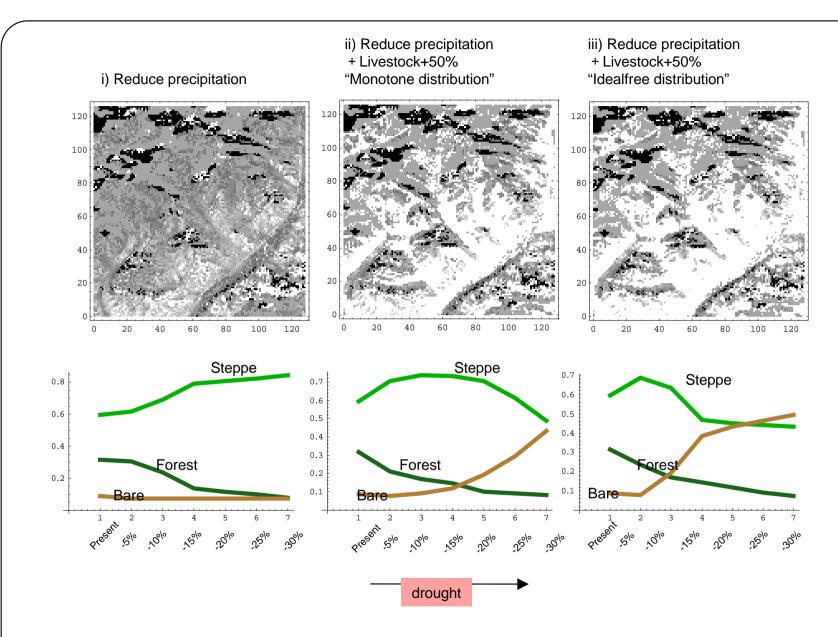

MODEL 1 RESULTS EQUILIBRIA of Soil Water

Negative interaction [Competition for resources] stabilizes the vegetation to the stable steady states: *climax*.

MODEL 1+2 Spatial Projection of 40yrs future

Deforestation & Desertification might proceed heterogeneously acording to the topography

Lacking of specialists in taxonomy

- Training parataxonomists through workshop
- 1st workshop on Polychaetes held in 27-29 September, 2003
- 9 workshops have been held

Joint sampling with developing country scientists

To use GEOSS for the management adaptive to climatic change

Observation

- In situ, process oriented observation
- Long-term continuity with repeatable way
- Multi-scale, integrated observation sites (including human dimension)
- Devices linking in-situ and remote sensing

• Network

 Enhance networks (multi-scale, multi-organization, multidisciplinary)

Information

- Increase data sharing, interoperability and integration for user's scenario
- Predicting models
 - Basing on impact-response scenario
- Capacity Building
 - For developing country and voluntary observation

Summary Report Using GEOSS for managing Ecosystem and conserving Biodiversity

The Asia-Pacific region includes a variety of ecosystems, ranging from low to high latitudes. However, human populations and economies are growing rapidly in this region, thereby causing stronger interactions with global warming. This effect is expected to continue and increase.

To establish an effective observing system for monitoring impacts of global warming and developing adaptive measures, Asia-Pacific nations must coordinate their observation networks and improve interdisciplinary collaboration and observation capacity under the framework of GEOSS, with the aim of conserving ecosystems and biodiversity in the Asia-Pacific region.

GEO is expected to strengthen the following GEOSS Tasks:

- Ecosystem Classification and Mapping
- Regional Networks for Ecosystems
- Global Ecosystem Observation and Monitoring Network
- Capturing Historical Biodiversity Data
- GEO BON (Biodiversity Observation Network)
